

HIV AWARENESS ANSUNI BAATON KE SATH

LEARNING IN FELLOWSHIP TOGETHER

Start Talking. Stop HIV.

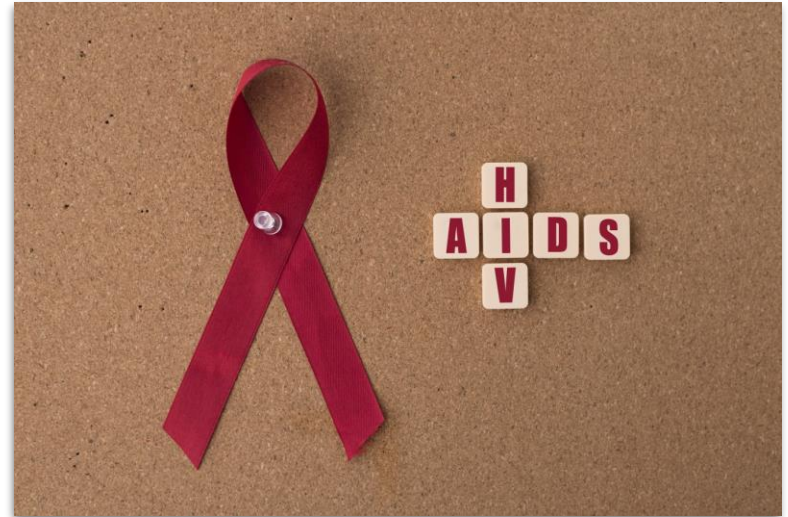

KUCH SAWALON KI - MEHFIL

- What is HIV?
- What is AIDS?
- What is the Difference between HIV & AIDS?
- What are the treatment of HIV & AIDS?
- What are the causes of Spreading of HIV & AIDS?
- What are the symptoms of HIV?
- How quickly do people infected with HIV develop AIDS?
- Where is HIV found in body?

HIV KYA HAI?

HIV - Human Immunodeficiency Virus, is a virus that weakens the immune system, making it harder for the body to fight off infections and diseases.

PRIMARY INFECTION (ACUTE HIV)

Possible signs and symptoms include:

- Fever
- Headache
- Rash
- Cough
- Night sweats
- Diarrhea
- Swollen lymph glands, mainly on the neck
- Muscle aches and joint pain
- Sore throat and painful mouth sores
- Weight loss

AIDS KO SAMJHE:

AIDS -Acquired Immunodeficiency Syndrome, is the advanced stage of HIV (Human Immunodeficiency Virus) infection.

HIV -----10 To 15 years ----- **AIDS**

I AM HIV POSITIVE, NOW YOU TELL
ME HOW I GOT HIV?

CAUSES OF HIV AND AIDS

USE OF CONTAMINATED NEEDLES AND SYRINGES:

Individuals who engage in the sharing of needles, particularly among people who inject **drugs**, are at a heightened risk of HIV transmission.

Every year - 1 out 300

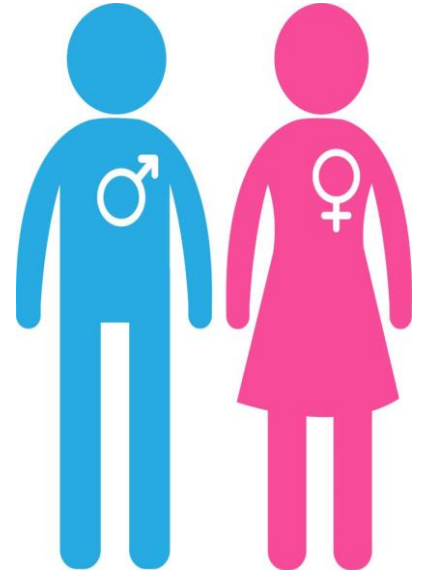

BLOOD AND BLOOD PRODUCT TRANSFUSION :

If the donor's blood is infected with the virus and not properly screened.

UNPROTECTED SEXUAL INTERCOURSE: -

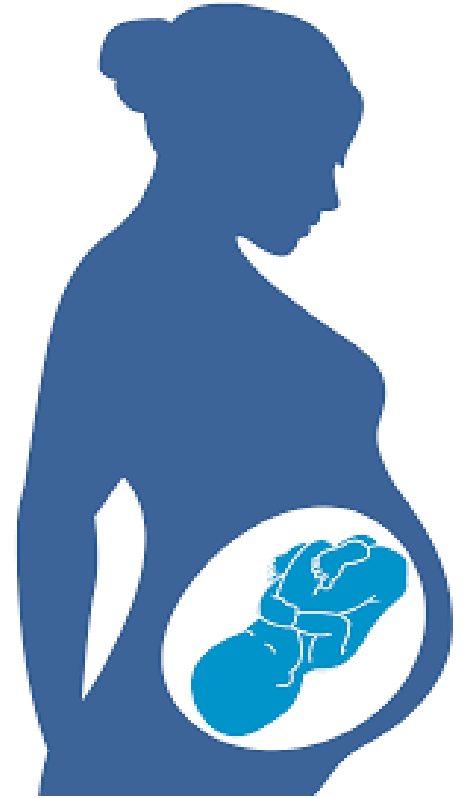

Engaging in unprotected sex with an infected person increases the risk of **HIV** and **other STIs** entering our body.

*In India, sexual transmission is responsible for **87.4** percent of reported HIV cases (world bank)

MOTHER-TO-CHILD TRANSMISSION

- During Pregnancy
- Childbirth
- Breastfeeding

PREVENTION OF HIV AND AIDS ?

- Regular HIV testing
- Avoid sharing needles or syringes
- Education and awareness
- Access to healthcare
- Safe and protected sex

Treatment of HIV

A.R.T - (Antiretroviral therapy) medicines, which work by stopping the virus replicating in the body.

*In India, in 2022, there were about 1.6 million with HIV who were on antiretroviral treatment (ART). There has been a sharp increase in the number of people on ART since 2005.(statista.com)

A.R.T MEDICATION KI JARURAT KO SAMJHE:

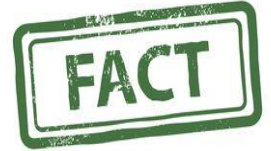

- Prevention of HIV Progression to AIDS
- Preservation of Immune Function
- Reduced HIV Transmission Risk
- Enhanced Quality of Life
- Viral Load Suppression
- Extended Lifespan

*ART is also having side effects like ; Vomiting , feeling low , Headache etc while consuming it for first time.

AAO PATA LAGAYE:

- HIV can be transmitted through Physical contact.
